

Data Table Showing At-Risk Species Individual FSA Values

The table that follows is a database output from the ORBIC BIOTICS geodatabase, which contains records showing the locations of all at-risk species known from Oregon. Details about this dataset can be found at <https://inr.oregonstate.edu/orbic/data-requests>.

The search generating the table identified the numbers of individual population records for every at-risk species in the data that occur within each FSA. The table is sorted by major taxonomic group, and then by species name, and lastly by the FSA code. Additional details regarding all information in the table can be found on the ORBIC website (<https://inr.oregonstate.edu/orbic>) or in the ORBIC 2019 Rare, Threatened, and Endangered Species of Oregon (<https://inr.oregonstate.edu/sites/inr.oregonstate.edu/files/2019-rte-book.pdf>). There are 11 columns shown in this table, described below:

EO Count – the numbers of populations of the taxon found in the FSA

FSA Code – the code and two letter abbreviation of the FSA the species occurs in

NatureServe Global Rank – the status of the species across its entire range. The field includes the global rank for full species, followed by a subspecies or varietal rank for subspecies or varieties, and range from 1, or critically endangered to 5, or demonstrably secure. More detailed information on species ranks are on the following page. d 6 of the

NatureServe State Rank – the status of the species in Oregon only, independent of their status elsewhere across their range.

Scientific Name – the scientific name of the species as recognized by ORBIC. See the ORBIC 2019 RTE book for scientific authorities.

Common Name – the common name of the species as recognized by ORBIC.

Taxonomic Category – the type of species, including Alga, Chromist, Fungi, Invertebrate Animals, Non-Vascular Plants, Vascular Plants and Vertebrate Animals.

USESAs Status – the federal status under the US Endangered Species Act (ESA), as defined by the US Fish and Wildlife Service or the National Oceanic and Atmospheric Administration (NOAA) Fisheries. Definitions are on the following page.

State Status – the state status, including the Oregon ESA status, as defined by the state agency that manages the species. The Oregon Department of Fish and Wildlife manages vertebrates while the Oregon Department of Agriculture manages the vascular plants. Definitions are on the following page.

ORBIC List – represents the general status of the species in Oregon. These include List 1 for taxa threatened or endangered across their range, List 2 for species threatened or endangered in Oregon but more common or stable elsewhere, List 3 for taxa that may be threatened or endangered in Oregon or across their range, but which need more information before they can be included on List 1 or 2, and List 4 for species which require monitoring because they are rare or declining, but which currently are not threatened or endangered in Oregon. Species with no ORBIC list are not being monitored in the database.

Value – the value given to the species in the FSA. Values range from 0 to 9, based on global and state ranks, federal and state status, and the species vulnerability to wildfire.

More details on the status categories and definitions are on the following two pages, which are followed by the 101 page table listing species occurrences in each FSA.

Endangered. Taxa which are in danger of becoming extinct within the foreseeable future throughout all or a significant portion of their range.

Threatened. Taxa which are likely to become endangered within the foreseeable future.

LE = Listed Endangered. Taxa listed by the USFWS or the National Marine Fisheries Service (NOAA Fisheries) as Endangered under the Endangered Species Act (ESA), or by the ODA or ODFW under the Oregon Endangered Species Act of 1987 (OESA).

LT = Listed Threatened. Taxa listed by the USFWS, NOAA Fisheries, ODA, or ODFW as Threatened.

PE = Proposed Endangered. Taxa proposed by the USFWS or NOAA Fisheries to be listed as Endangered under the ESA or by ODFW or ODA under the OESA.

PT = Proposed Threatened. Taxa proposed by the USFWS or NOAA Fisheries to be listed as Threatened under the ESA or by ODFW or ODA under the OESA.

C = Candidate. Taxa for which NOAA Fisheries or USFWS have sufficient information to support a proposal to list under the ESA, or which is a candidate for listing by the ODA under the OESA.

SOC = Species of Concern. Species of Concern is an informal term that commonly refers to those species which the USFWS believes might be declining or in need of conservation actions. The term Species of Concern is not defined in the ESA, receive no legal protection and the use of the term does not necessarily mean that the species will eventually be proposed for listing as a threatened or endangered species.

PS = Partial Status. Taxa for which some but not all populations have status.

The criteria for the ORBIC lists are as follows:

List 1: Threatened or Endangered Throughout Range

contains taxa that are threatened with extinction or presumed to be extinct throughout their entire range. Includes many rare Oregon endemic species.

List 2: Threatened or Endangered in Oregon but Secure Elsewhere

contains taxa that are threatened with extirpation or presumed to be extirpated from the state of Oregon, but are secure or abundant elsewhere. These are often peripheral or disjunct species which are of concern when considering species diversity within Oregon's borders. They can be very significant when protecting the genetic diversity of a taxon. ORBIC regards extreme rarity as a significant threat and has included species which are very rare in Oregon but secure elsewhere on this list.

List 3: Review

contains taxa for which more information is needed before status can be determined, but for which there is reason to believe they may be threatened or endangered in Oregon or throughout their range.

List 4: Watch

contains taxa which are of conservation concern but are not currently threatened or endangered. This includes taxa which are very rare but are currently secure in Oregon, as well as taxa which are declining in numbers or habitat but are still too common to be proposed as threatened or endangered. While these taxa may not currently need the same active management attention as threatened or endangered taxa, they do require continued monitoring.

NatureServe/Heritage Network Ranks

ORBIC participates in an international system for ranking rare, threatened and endangered species throughout the world. It was developed by The Nature Conservancy and is now maintained by NatureServe in cooperation with Natural Heritage Programs and Conservation Data Centers in all fifty U.S. states, DC, Navajo Nation, Tennessee Valley Authority, Puerto Rico, all Canadian provinces, and many Latin American countries.

NatureServe Rank Definitions

NatureServe network ranks use a 1-5 scale from imperiled to secure, based on the number of known occurrences, threats, trends, sensitivity, area occupied, and other biological factors. In this book, the ranks occupy two lines. The Global Rank begins with a "G" and represents the status for the taxon's entire range. If the taxon has a trinomial (a subspecies, variety or recognized race), the global rank is followed by a "T" rank indicator. The State Rank represents the status of the taxon in Oregon and begins with the letter "S". The rank values are summarized below (see Animal section for migratory bird ranks):

- 1 = Critically Imperiled.** At high risk of extinction due to extreme rarity (often 5 or fewer populations), very steep declines, or other factors.
- 2 = Imperiled.** At high risk of extinction due to very restricted range, very few populations, steep declines, or other factors, often with 6-20 occurrences.
- 3 = Vulnerable.** At moderate risk of extinction due to a restricted range, relatively few populations, recent and widespread declines, or other factors, often with 21-100 occurrences.
- 4 = Apparently Secure.** Uncommon but not rare; some cause for long-term concern due to declines or other factors, often with more than 100 occurrences.
- 5 = Secure.** Demonstrably common, widespread and abundant.
- X = Presumed Extirpated or Extinct.** Species not located despite intensive searches and virtually no likelihood of rediscovery.
- H = Historical, Possibly Extinct.** Known from only historical occurrences but still some hope of rediscovery. There is evidence that the species may be extinct or the ecosystem may be eliminated throughout its range, but not enough to state this with certainty.
- U = Unrankable.** Currently unrankable due to lack of information or substantially conflicting information about status and trends.
- NR = Not yet ranked.** Status not yet assessed.

NatureServe Rank Qualifiers

- Q = Questionable Taxonomy.** Global ranks sometimes have a "Q" at the end. This indicates that there are questions related to the taxonomic validity of the taxon.
- ? = Inexact Numeric Rank.** Taxa that can be ranked, but for which the rank is not certain. Ranks with a "?" indicate that the rank is probably correct, but that either documentation is lacking or there is still some uncertainty. Such ranks are always provisional.
- Range Ranks.** A numeric range rank is used to indicate uncertainty about the exact status of a taxon. These can be G1G3, S2S3, etc. Ranges indicate that the predicted final rank would be within the range, but with no indication of preference among the possibilities. Large ranges (e.g., G1G4) are assigned as Unrankable.

More details on the Natural Heritage Ranking system and status factors can be found at the NatureServe web site:
